

- **Display name:** Google

- **Email address:**

`no-reply@accounts.google.com`

- **Mailed-by:** `gaia.bounces.google.com`

- **Signed-by:** `accounts.google.com`

What to check

The important part is the domain after @:

`accounts.google.com`

That is a Google-owned domain, and the

Signed by field also shows:

`accounts.google.com`

The **Mailed by** field is:

`gaia.bounces.google.com`

The sender is displayed as Google with the email address

`no-reply@accounts.google.com`. The sender domain is `accounts.google.com`.

The email also shows "Mailed-by: `gaia.bounces.google.com`" and "Signed-by: `accounts.google.com`". These details are consistent with Google's domain and do not show an obvious sender-domain mismatch. Therefore, based on the visible sender information, there is no clear evidence of email spoofing.

You can also see security activity at

<https://myaccount.google.com/notifications>

Suspicious links/attachments: No attachment is visible. The email contains a “Check activity” button and a visible security-activity URL. The visible URL is <https://myaccount.google.com/notifications>, which uses the google.com domain. No suspicious destination can be confirmed from this screenshot.

Step 4: Identify Suspicious Links or Attachments

The email was inspected for links and attachments. No attachment was found.

The email contains a "Check activity" button and a visible URL:

`https://myaccount.google.com`

`/notifications`. The visible URL uses the `google.com` domain and therefore does not show an obvious domain mismatch.

The actual destination of the "Check activity" button was not verified because the link was not clicked, following safe email-analysis practices

6. Mismatched URL Analysis:

I hovered over the “Check activity” button without clicking it and checked the destination URL displayed by the browser. I compared the displayed destination with the visible Google URL. A difference between the visible URL and the actual destination would indicate a suspicious or mismatched URL.

5. Urgent or Threatening Language

The email creates a sense of urgency and concern by stating:

“Recovery phone was changed.”

It also says:

“If you didn't change it, you should check what happened.”

The **“Check activity”** button encourages the recipient to take immediate action. This type of language can make the user worried about unauthorized access to their account and encourage them to click the link.

Finding: The email contains **urgency/fear-based language**, which is a common phishing indicator.
